Android has a few great VNC apps, and a few not so great. If we had to pick the best, we'd choose PocketCloud for how insanely easy to use it is. PocketCloudPlatform: iOS/Android and Windows/Mac Price: Free, \$14.99 Pro Download PageFeaturesIncredibly easy-to-use interface, no instructions requiredHoneycomb tablet supportAutomatically detects your running computers through your Google Account, no new account creation necessaryUses a cursor for precise actionsKeyboard auto-activationCustom keyboards with shortcutsAdd as many computers as you want (Pro only; free limited to 1)Mounts your phone's SD card on your computer as a network drive when connected (Pro only)256-bit NLA/TLS encryption for RDP, 128-bit encryption for VNC (Pro only)Remote sound support (Pro only)More advanced features available in the Pro versionWhere It ExcelsPocketCloud excels at being easy to use. You don't need to learn any special gestures or read any instructions to get started. Just fire up the server app on your computer, type in your Google Account, and then fire up the client on your phone. After typing in your Google credentials, you can tap right into your computer and control it with a cursor that's extremely easy to use. It also has a lot of nice tweaks in the settings that let you change the picture quality and bandwidth usage, so you get the best experience possible. It does still have a few useful gesturesWhere It Falls ShortWhile PocketCloud is easy to use, it can be a little slow to use. That is, when compared with something like TeamViewer, it seems like you're clicking through a lot of menus and hitting a lot of buttons to do stuff. Other apps require a bit of orientation before you can start using them, but are often better off for it in the end. However, it's still a pretty small downside, and the precision you get from PocketCloud's interface is really nice, especially when you're trying to control a 1080p monitor from a tiny phone. It also changes the resolution and aspect ratio of my screen when VNCing into Windows, which seems unnecessary and is annoying.The CompetitionPhoneMyPC is my personal favorite of the bunch. Unlike PocketCloud, it requires a bit of orientation before you get started—learning the gestures, tweaking settings, and so on—but it is worth it once you start using it. Instead of controlling the mouse with buttons, most of its done through taps and gestures, which are much faster than PocketCloud's method, though it takes a bit more work to start. It has some nice quality tweaking settings, as well as the ability to change what each gesture does, which is something no other VNC client has. Its big drawback is that its Windows only and that it's \$15, so if you're looking for cheap, cross-platform VNC support, this isn't it. If you're on Windows, though, and you're willing to pay the \$15, it's a fantastic client. If you want something a bit cheaper but with a similar control scheme, you'll want to try...TeamViewer is another great, cross-platform client. Its control is similar to PhoneMyPC, but with a few missing features, like the ability to customize gestures and forward sound to your phone. It is, however, free, which is very nice. Again, it takes a bit of orientation, but once you've got the gestures down (which doesn't take too long), it's a breeze to control.Splashtop is another popular option. It has some nice gestures, like two-finger scrolling, but others are a bit unintuitive. It also has the annoying resolution change "feature" that PocketCloud does, with seemingly no option to turn it off. However, it played Flash videos better than any of the other clients, so if your goal is to watch Flash videos on your phone, Splashtop's probably the best option.LogMeIn is one of the biggest names in VNC, but LogMeIn Ignition for Android is a little disappointing. While it's one of the smoothest clients I found, controlling it was more difficult than every other client I've used. And, with a \$15 price tag, it's definitely not worth the cost. I'd say go with TeamViewer or PocketCloud before trying this one out.Lifehacker's App Directory is a new and growing directory of recommendations for the best applications and tools in a number of given categories. Skip to content * Small improvement in connection startup speed* Fixed a crash on first ever connection when toolbar was aligned to end* Fixed a crash when entering picture-in-picture for servers with large aspect ratio AVNC is an open source VNC client for Android. It allows you to remotely control any device running a VNC server.Features:- Material Design (with Dark theme)- Configurable gestures- Tight encoding- Virtual Keys- Picture-in-Picture mode- View-only mode- Zeroconf Server Discovery- TLS support (AnonTLS, VeNCrypt)- SSH tunnel (VNC over SSH)- Import/Export servers- VNC Repeater support- Clipboard Sync with server Although APK downloads are available below to give you the choice, you should be aware that by installing that way you will not receive update notifications and it's a less secure way to download. We recommend that you install the F-Droid client and use that. Download F-Droid This version requires Android 5.0 or newer. It is built and signed by F-Droid, and guaranteed to correspond to this source tarball. Permissions Allows the app to create network sockets and use custom network protocols. The browser and other applications provide means to send data to the internet, so this permission is not required to send data to the internet. Allows the app to use biometric hardware for authentication Allows the app to use fingerprint hardware for authentication Download APK 5.6 MiB PGP Signature | Build Log This version requires Android 5.0 or newer.
